Turf Reinforcement Net

Retain beautiful natural grassed areas even where there is frequent pedestrian use or where light vehicles have access.

A cost effective easy to install solution with excellent results.

**Product:**

EXPO-NET Turf Reinforcement mesh is a robust polymeric grid which provides a permanent stable solution for the reinforcement of grassed areas.

The product is simply laid over grass or a recently seeded plot, pinned in place and the grass roots entwine with the grid. The grass then grows through the grid to create a stable natural grassed appearance.

**Typical Installations:**

* Urban Parkland
* Parking areas for mobile homes / caravans
* Car parking areas
* Access Routes
* Golf Buggy pathways
* Grassed areas subject to pedestrian usage

**Installation:**

Ideally the mesh should be laid early in the growing season to allow the grass roots to intertwine with the mesh as quickly as possible. The mesh should be laid flat and securely fixed using simple metal J or U pins. Where an area wider than 2m is to be covered rolls should be laid side by side, each roll overlapped by approximately 100 – 200mm. Pins should be placed at regular intervals dependent upon ground conditions, as a rough guide spacing of pins should be around 80 – 120cm. Once established the grass can be treated in the usual manner.
